Application for Mobile Engineer iOS and Android

Islamabad, Pakistan | +92 309 525 1250 | emikramulhaq@gmail.com

LinkedIn | Project portfolio on GitHub | Available for remote work

Dear Hiring Team,

I'm applying for your remote Mobile Engineer position. I bring 5+ years of mobile development experience, combining Flutter delivery for Android and iOS with native iOS work in Swift and UIKit. Your focus on reliable mobile applications and AI-powered experiences is closely aligned with the products I have worked on and the engineering practices I use today.

At AT-Tech, I worked with the iOS team on Dr.iQ, a production healthcare application serving NHS patients. I enhanced features and modules and contributed to a major architecture refactor. My iOS experience includes concurrency with GCD and async/await, persistence, notifications, and App Store deployment and maintenance workflows.

At Techtronix, I lead Carbee's Flutter Web team while supporting mobile delivery. My responsibilities include secure API integration, centralized error handling, reusable architecture, CI/CD, QA handoffs, and release coordination. This work requires close collaboration with backend, mobile, QA, and product colleagues to resolve issues and maintain dependable delivery.

My project experience also includes Afterlife AI, an avatar and chat application, and a Google ML Kit-based recognition and translation app. Separately, I actively use AI-agent-assisted and spec-driven development for planning, implementation, testing, and review. I would welcome a technical discussion about how this experience can contribute to your mobile and AI product work.

You can explore my project portfolio at <https://github.com/EMIkram>, including links to published applications. I am based in Islamabad and available for remote work, and I am open to discussing either full-time or contract engagement.

Thank you for considering my application. I would welcome the opportunity to discuss my work and the needs of your team.

Best regards,

Muhammad Ikram UI Haq
